Sut

1-30 Cancelled.

31 (Currently Amended) An emboli capturing system for capturing emboli in a body lumen, comprising:

an elongate member having a proximal end and a distal end;

a flexible emboli capturing device <u>having a distal end and a proximally opening mouth</u>, the <u>distal end</u> mounted proximate the distal end <u>of the elongate member</u>, the <u>flexible expandable</u> emboli capturing device <u>forming a distally disposed emboli collection portion extending</u> proximally over a portion of the elongate member to form the <u>with a proximally opening mouth</u>; and

a frame disposed on the proximally opening mouth of the flexible emboli capturing device and connected to the elongate member.

- 32. (Previously Presented) The emboli capturing system of claim 31, wherein the frame is slideably disposed about the elongate member.
- 33. (Previously Presented) The emboli capturing system of claim 31, wherein the frame is attached to the elongate member proximal of where the flexible member is attached.
- 34. (Previously Presented) The emboli capturing system of claim 31, wherein the frame includes a flexible material.

- 35. (Previously Presented) The emboli capturing system of claim 31, wherein the frame includes a shape memory alloy.
- 36. (Previously Rresented) The emboli capturing system of claim 31 wherein the frame includes a continuous loop.
